COMPUTING**

VISHAL M.D.

CH.SC.U4CSE24150

Week – 1

Date - 27/11/2025

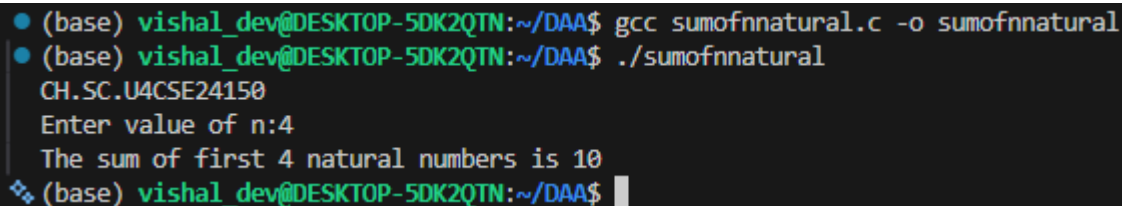

Design and Analysis of Algorithm(23CSE211)

1. Write a program to find sum of first n natural numbers using user defined functions

Code:

```
#include<stdio.h>
int sum(int n){
int sum=0;
for(int i=1;i<n+1;i++){
sum+=i;
}
return sum;
}
int main(){
printf("CH.SC.U4CSE24150\n");
int n;
printf("Enter value of n:");
scanf("%d",&n);
printf("The sum of first %d natural numbers is %d\n",n,sum(n));
}
```

Output:

```
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ gcc sumofnnatural.c -o sumofnnatural
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ ./sumofnnatural
CH.SC.U4CSE24150
Enter value of n:4
The sum of first 4 natural numbers is 10
❖ (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$
```

Space Complexity:

Space Complexity $O(1)$ 3 variables

Justification:

In main(): only 1 int variable n

In sum():int variables - sum,return

so the worst case is $O(1)$

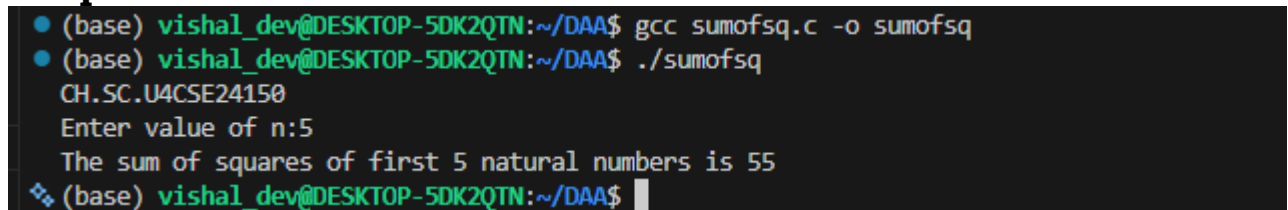

space used 12 bytes

2. Write a program to find sum of squares of first n natural numbers

Code:

```
#include<stdio.h>
int main(){
int n;
int sum=0;
printf("CH.SC.U4CSE24150\n");
printf("Enter value of n:");
scanf("%d",&n);
for(int i=1;i<n+1;i++){
sum+=i*i;
}
printf("The sum of squares of first %d natural numbers is
%d\n",n,sum);
}
```

Output:

```
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ gcc sumofsq.c -o sumofsq
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ ./sumofsq
CH.SC.U4CSE24150
Enter value of n:5
The sum of squares of first 5 natural numbers is 55
❖ (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$
```

Space Complexity:

Space Complexity $O(1)$ 2 variables

Justification:

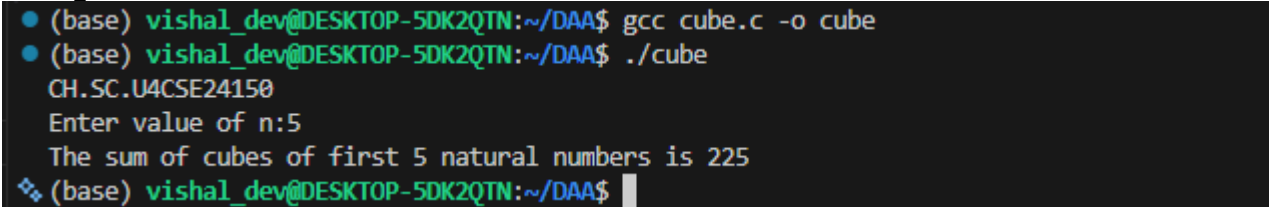

In main(): int variables - n,sum
so the worst case is $O(1)$
space used 8 bytes

3. Write a program to find sum of cubes of first n natural numbers

Code:

```
#include<stdio.h>
int main(){
printf("CH.SC.U4CSE24150\n");
int n;
int sum=0;
printf("Enter value of n:");
scanf("%d",&n);
for(int i=1;i<n+1;i++){
sum+=i*i*i;
}
printf("The sum of cubes of first %d natural numbers is
%d\n",n,sum);
}
```

Output:

```
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ gcc cube.c -o cube
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ ./cube
CH.SC.U4CSE24150
Enter value of n:5
The sum of cubes of first 5 natural numbers is 225
❖ (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$
```

Space Complexity:

Space Complexity $O(1)$ 2 variables

Justification:

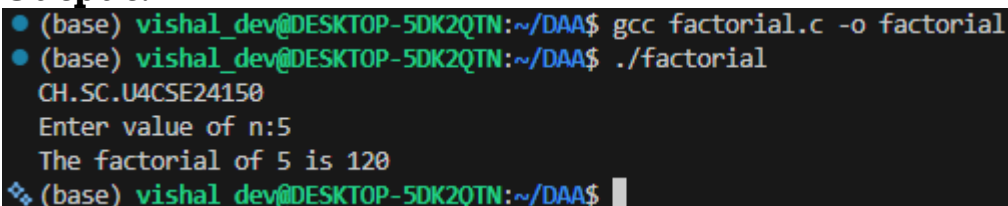

In main(): int variables - n,sum
so the worst case is $O(1)$
space used 8 bytes

4. Write a program to find factorial of the given integer using recursion

Code:

```
#include<stdio.h>
int factorial(int n){
if(n==1){
return 1;
}
else{
return n*factorial(n-1);
}
}
int main(){
int n;
printf("CH.SC.U4CSE24150\n");
printf("Enter value of n:");
scanf("%d",&n);
printf("The factorial of %d is %d\n",n,factorial(n));
}
```

Output:

```
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ gcc factorial.c -o factorial
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ ./factorial
CH.SC.U4CSE24150
Enter value of n:5
The factorial of 5 is 120
❖ (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$
```

Space Complexity:

Space Complexity $O(n)$ 1 variable

Justification:

In main(): only 1 int variable n

In factorial():int variable - return

so the worst case is $O(n)$ as the value is returned n times.

space used $4+4n$ bytes

5. Write a program to transpose a 3x3 matrix

Code:

```
#include<stdio.h>
int main(){
printf("CH.SC.U4CSE24150\n");
int mat[3][3]={0,0,0},{0,0,0},{0,0,0};
int trans[3][3]={0,0,0},{0,0,0},{0,0,0};
for(int i=0;i<3;i++){
for(int j=0;j<3;j++){
printf("Enter value of [%d][%d]:",i+1,j+1);
scanf("%d",&mat[i][j]);
}
}
for(int i=0;i<3;i++){
for(int j=0;j<3;j++){
trans[j][i]=mat[i][j];
}
}
for(int i=0;i<3;i++){
for(int j=0;j<3;j++){
printf("%d",trans[i][j]);
}
printf("\n");
}
}
```

Output:

```
● (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ gcc transpose.c -o transpose
● (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ ./transpose
CH.SC.U4CSE24150
Enter value of [1][1]:1
Enter value of [1][2]:2
Enter value of [1][3]:3
Enter value of [2][1]:4
Enter value of [2][2]:5
Enter value of [2][3]:6
Enter value of [3][1]:7
Enter value of [3][2]:8
Enter value of [3][3]:9
147
258
369
❖ (base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$
```

Space Complexity:

Space Complexity $O(1)$ 2 arrays

Justification:

In main(): Arrays - mat[3][3], trans[3][3].

The total space is fixed (constant) regardless of any input, as the matrix size is hardcoded to 3x3.

The worst case is $O(1)$.

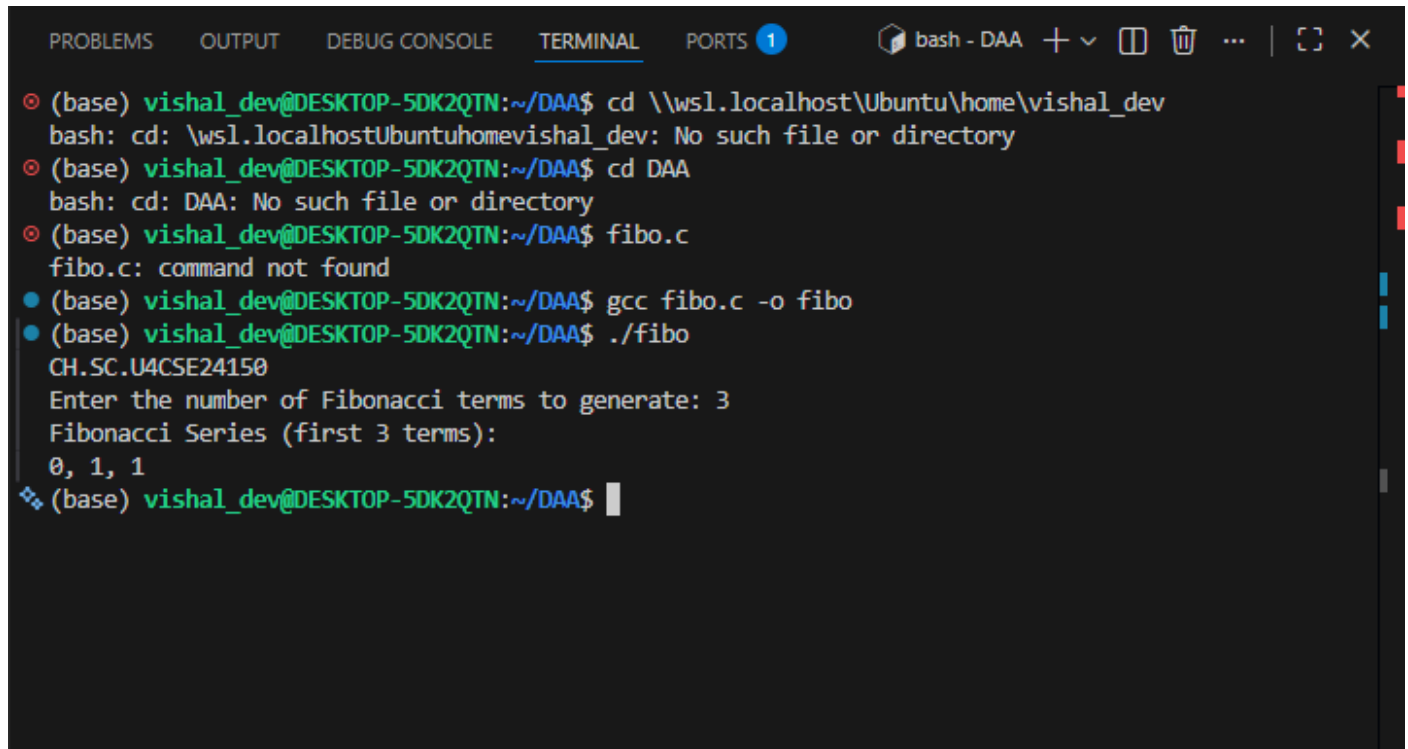

space used 72 bytes

6. Write a program to find Fibonacci series**Code:**

```
#include <stdio.h>
int main() {
    int n;
    printf("CH.SC.U4CSE24150\n");
    printf("Enter the number of Fibonacci terms to generate: ");
    if (scanf("%d", &n) != 1) {
        printf("Invalid input. Please enter an integer.\n");
        return 1;
    }
    if (n <= 0) {
        printf("Please enter a positive integer greater than 0.\n");
        return 0;
    }
    int t1 = 0;
    int t2 = 1;
    int nextTerm;
    printf("Fibonacci Series (first %d terms):\n", n);
    if (n >= 1) {
        printf("%d", t1);
    }
    if (n >= 2) {
        printf(", %d", t2);
    }
    for (int i = 3; i <= n; ++i) {
        nextTerm = t1 + t2;
        if (nextTerm < t2) {
            printf("\n\n(Note: Integer overflow occurred at term %d. Output may
            be inaccurate from this point.)\n", i);
            break;
        }
        printf(", %d", nextTerm);
        t1 = t2;
```

```
t2 = nextTerm;
}
}
```

Output:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS 1 bash - DAA + v [] [X]
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ cd \\wsl.localhost\Ubuntu\home\vishal_dev
bash: cd: \wsl.localhostUbuntuhome\vishal_dev: No such file or directory
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ cd DAA
bash: cd: DAA: No such file or directory
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ fibo.c
fibo.c: command not found
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ gcc fibo.c -o fibo
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$ ./fibo
CH.SC.U4CSE24150
Enter the number of Fibonacci terms to generate: 3
Fibonacci Series (first 3 terms):
0, 1, 1
(base) vishal_dev@DESKTOP-5DK2QTN:~/DAA$
```

Space Complexity:

Space Complexity $O(1)$ 4 variables

Justification:

In main(): int variables - n, t1, t2, nextTerm.

The total space is fixed (constant) regardless of the input value 'n'.

The worst case is $O(1)$.

space used 16 bytes
